Overview of Risk Management & RWAs

Capital Management

The Branch's objectives when managing capital is driven by strategic and organizational requirements, considering the below :

- To comply with the capital requirements set by the Central Bank of U.A.E.,
- To safeguard the Branch's ability to manage all risks inherent in its business and increase the returns for the shareholders, and
- To maintain a strong capital base to support the development of its business.

Effective 2017, the capital is computed at the Branches level using the Basel III framework of the Basel Committee on Banking Supervision (Basel Committee'), after applying the amendments advised by the CBUAE at three levels, namely Common Equity Tier 1 (CET1'), Additional Tier 1 (AT1') and Total Capital. The minimum capital adequacy requirements as set out by the Central Bank are as follows:

- Minimum common equity tier 1 (CET 1) ratio of 7% of risk weighted assets (RWAs).
- Minimum tier 1 ratio of 8.5% of RWAs.
- Total capital adequacy ratio of 10.5% of RWAs.
- Capital conservation buffer – 2.5% of RWAs.

The regulatory capital comprises of:

CET1 capital is the highest quality form of capital, comprising share capital, legal, statutory and other reserves, fair value reserve, retained earnings, after deductions for intangibles and other regulatory adjustments relating to items that are included in equity but are treated differently for capital adequacy purposes under 'CBUAE' guidelines.

Tier 2 capital comprises of collective provision and reserves.

The Branch follows the standardized approach for Credit, Market and Operational risk, as permitted by the UAE Central Bank and as per Pillar 1 of Basel III. Capital adequacy and the use of regulatory capital are monitored on a regular basis by the Branch' management, employing techniques based on the guidelines developed by the Basel Committee and the Central Bank of United Arab Emirates. The required information is filed with the regulators on a quarterly basis.
